4-QUATTRO PRO LE

PRODUCT POSITIONING

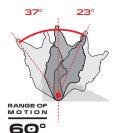

The 4-QUATIRO PRO Limited Edition offers extreme performance, re-engineered for Nikolai Schirmer's unprecedented feat. It's the lightest high-performance freeride boot on the market, built to push the limits. This boot is for those who dare to go where no one has been before.

12014/501.1

FEATURES AND BENEFITS

Shell: Pebax® RNew® shell with carbon core technology for greater impact absorption while maintaining rigidity.

Cuff: A Pebax® overlap cuff with increased height and thickness for increased torsional rigidity, downhill control and performance.

Strap: The new SCARPA Vario strap dynamically adapts to your movement, boosting power transmission and comfort even in the most extreme conditions.

Carbon Core: CARBON CORE technology increases torsional and longitudinal stiffness for greater precision and control.

Liner: Intuition® 4Pro Flex Ride features a plastic tongue for quicker impulse transmission and protection from shin-bang.

SPECIFICATIONS

Size: 24.5-33 (half sizes)

Weight: 1540g; 3lb 6.3oz (½ pair size 27) Shell · Cuff · Tongue: Pebax® Rnew® / Pebax® Rnew® / Pebax®

Liner: 4 Pro Flex Ride Last: 100mm 130+

Ski/Walk Mode: Secure SpeedLock 4

4 Buckle Closure + Vario Power Strap Closure:

19° (-2°/-4°) Forward Lean:

Range of Motion: 60°

Outsole: PRESA® SKI-01/GripWalk Tour (ISO 23223)

Binding System: Alpine GripWalk + AT + TLT

Origin: Italy

TECHNOLOGIES

TECHNOLOGY · MATERIALS · CONSTRUCTION

Pebax® Rnew® Elastomers - Pebax® Rnew® materials are premium bio-based thermoplastic elastomers (TPE) made from the oil of the castor plant. They offer a unique combination of high performance properties: sustained flexibility at low temperature, high cold impact resistance, and outstanding energy return. These elastomers are typically 20% lighter than commonly used materials. In comparison to the Pebax® material, Pebax® Rnew® elastomers combines a bio-sourced polyamide 11 rigid block (PA11) with a hydrophobic polyether soft chain. Bridging the gap between thermoplastics and rubbers, Pebax® Rnew® materials offer a sustainable solution for a wide range of high performance applications in sport markets.

Pebax® Elastomers — Designed for extreme conditions, Pebax® elastomers are a premium performance material that has been used for many years in winter sports equipment. They offer a unique combination of high performance properties: sustained flexibility at low temperature, high cold impact resistance, and outstanding energy return. These elastomers are typically 20% lighter than common materials. They combine a polyamide 12 rigid block (PA12) with a hydrophobic polyether soft chain. Bridging the gap between thermoplastics and rubbers, Pebax® materials are an excellent choice for AT ski boots.

PRESA® Outsole with GripWalk Technology - This dual-density, ergonomic design guarantees excellent grip when walking, and is compatible with all GripWalk Alpine bindings as well as all AT and TLT bindings.

RECCO® Technology - SCARPA® is the first brand to integrate the RECCO® system in its boots. It has proven a very effective solution and been adopted by an extensive network of ski resorts, helicopter skiing operations, parks, and search-and-rescue organizations in Europe, Japan, North and South America. RECCO® technology enables rapid directional pinpointing of a victim's precise location using harmonic radar. The two-part system consists of a RECCO® detector used by professional rescue teams and RECCO® reflectors that are integrated into the FBC strap on the boots.

Intuition® - Intuition liners are the gold standard for lightweight, warm, thermo-formable ski boot liners. SCARPA is the long time, exclusive partner of Intuition in the alpine touring and telemark categories, bringing you the ultimate in back-country performance, fit and comfort. Intuition liners feature multi-density layups of closed-cell foam that is thermally moldable, allowing you to customize a perfect fit and enjoy the ultimate in comfort, durability and warmth in the backcountry.

SCARPA Vario Strap - The new VARIO STRAP expands in three dimensions for a powerful closure providing enhanced impulse transmission, shock absorption, and progressive flex.

Alpine Axial Hybrid Construction - The new Alpine Axial Hybrid closure system is specially designed for hybrid boots that can be used for both on-piste and off-piste skiing. Thanks to the straps installed on the tongue and linked at the mid-point of the shell, it provides a snug fit at the forefoot, as well as ensuring a precise fit for all kinds and sizes of feet, as with the classic overlapping ski boot construction.

SCARPA Planet Friendly — Our products are used to access the most wonderful and unspoiled landscapes on earth. We feel we must do our best to help preserve these landscapes for both current and future generations. The Planet Friendly designation appears on products designed to tread lighter on the planet, using eco-friendly resources and processes like recycled content materials, vegan friendly sourcing and plant-based plastics.
