 SCARPA PRO FLEX TOURING  
 (M) 10659/501  
 (W) 10659/502

## FEATURES AND BENEFITS

- 01** **Shell:** Polyurethane shell delivers consistent flex, durability, and energy transfer in all conditions with up to 28% lower CO2 emissions.
- 02** **Cuff:** Polyurethane cuff provides progressive flex and responsive support with up to 28% lower CO2 emissions.
- 03** **Wave Closure:** Wave Closure is simply, easy to use, and provides the same closing force of a two-buckle system.
- 04** **Outsole:** Vibram® Cayman LT outsole improves traction up to 25% for added stability, increasing surface area by 50% added propulsion, increased braking power
- 05** **Liner:** Intuition® liner is thermoformable and guarantees a warm, precise and comfortable fit.

## SPECIFICATIONS

Size:	(M) 24.5-32 (half sizes) (W) 22.5-27 (half sizes)
Weight:	(M) 1460g; 3lb 3.5oz (1/2 pair size 27) (W) 1340g; 2lb 15.3oz (1/2 pair size 25)
Shell · Cuff · Tongue:	Polyurethane / Polyurethane / Pebax®
Liner:	Pro Flex Touring
Last:	102mm
Flex:	(M) 115 · (W) 125
Ski/Walk Mode:	Speedlock MLT
Closure:	Upper Buckle + HRS Strap + Wave M-LITE Closure + Power Strap
Forward Lean:	16°±2°
Range of Motion:	61°
Outsole:	Vibram® Cayman LT (ISO 9523)
Binding System:	TLT + AT
Origin:	Italy

## TECHNOLOGIES

## TECHNOLOGY · MATERIALS · CONSTRUCTION

**DESMOPAN® CQ MBC** – The Desmopan® CQ MBC range from Covestro consists of bio-circular TPU solutions. The solution is based on bio-circular-attributed content with up to 35% sustainable share from biomass and reduces the carbon footprint by up to 30% (in comparison with fossil-based equivalent grades). Bio-circular is about mixing fossil and renewable, recycled or waste based feedstock in existing manufacturing systems while keeping track of their quantities through detailed verified bookkeeping and allocate them to specific end products. With this solution partners such as SCARPA are able to save fossil resources and reduce their product's carbon footprint immediately.

**Pebax® Elastomers** – Designed for extreme conditions, Pebax® elastomers are a premium performance material that has been used for many years in winter sports equipment. They offer a unique combination of high performance properties: sustained flexibility at low temperature, high cold impact resistance, and outstanding energy return. These elastomers are typically 20% lighter than common materials. They combine a polyamide 12 rigid block (PA12) with a hydrophobic polyether soft chain. Bridging the gap between thermoplastics and rubbers, Pebax® materials are an excellent choice for AT ski boots.

**Vibram® Cayman LT Outsole** – The new Cayman LT sole from SCARPA and Vibram® has an ergonomic design that guarantees optimal grip when dealing in any type of terrain. Made of Durastep compound, it is equipped with Traction Lug Technology which increases traction by up to 25% while maintaining stability. Compliant with DIN ISO 9523 and compatible with all TLT bindings on the market.

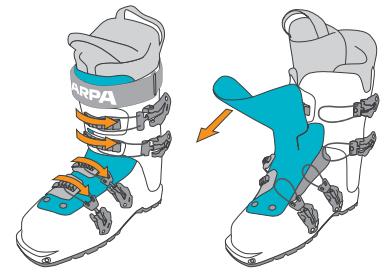

**RECCO® Technology** – SCARPA® is the first brand to integrate the RECCO® system in its boots. It has proven a very effective solution and been adopted by an extensive network of ski resorts, helicopter skiing operations, parks, and search-and-rescue organizations in Europe, Japan, North and South America. RECCO® technology enables rapid directional pinpointing of a victim's precise location using harmonic radar. The two-part system consists of a RECCO® detector used by professional rescue teams and RECCO® reflectors that are integrated into the FBC strap on the boots.

**Intuition®** – Intuition liners are the gold standard for lightweight, warm, thermo-formable ski boot liners. SCARPA is the long time, exclusive partner of Intuition in the alpine touring and telemark categories, bringing you the ultimate in back-country performance, fit and comfort. Intuition liners feature multi-density layups of closed-cell foam that is thermally moldable, allowing you to customize a perfect fit and enjoy the ultimate in comfort, durability and warmth in the backcountry.

**Wave Closure M-LITE** – The Wave Closure M-LITE system guarantees an accurate wrapping of the foot on four points between the malleolus and the forefoot that equalizes the pressure on the foot. 3 adjustment points are available for this system: the 3-tooth rack on the lever, micro-regulator on the toe and a second position for the lever on the strap.

**Alpine Axial Hybrid Construction** – The new Alpine Axial Hybrid closure system is specially designed for hybrid boots that can be used for both on-piste and off-piste skiing. Thanks to the straps installed on the tongue and linked at the mid-point of the shell, it provides a snug fit at the forefoot, as well as ensuring a precise fit for all kinds and sizes of feet, as with the classic overlapping ski boot construction.

**SCARPA Planet Friendly** – Our products are used to access the most wonderful and unspoiled landscapes on earth. We feel we must do our best to help preserve these landscapes for both current and future generations. The Planet Friendly designation appears on products designed to tread lighter on the planet, using eco-friendly resources and processes like recycled content materials, vegan friendly sourcing and plant-based plastics.
